

Abstract

5 The invention concerns a method for connecting a device to a wireless network.

The method comprises the steps :

- detecting a connection between the device and the bridge device ;
 - determining an address for the device and for the bridge device ;
 - have the bridge device separately register, with the respective
- 10 addresses, the device and itself as wireless devices on the wireless network.

A bridge device for implementing the method is also an object of the invention.
